

New Product: Mini-USB Series

Whether music is being transferred from an external hard drive, or a computer is being hooked up to powered desktop speakers, or a professional DAC is being fed through its Mini-USB input, these AudioQuest cables all make a very big difference ... this is just as true for a 128K file as for a 24/96 file. Respect the music, however it is packaged!

To respect different budgets and different applications, AudioQuest offers 5 models of low-jitter low-distortion Mini-USB cable, featuring better materials, critical signal-pair geometry, and for the top models AudioQuest's amazingly effective Dielectric-Bias System.
